

# Information Visibility Services™

Connect. Engage. Learn.

*As a decision-maker, your challenge is to decide:*

- What outcomes are critical?
- What information is required to gain insight?
- What actions are required to achieve success?

*Your solution is Information Visibility Services™.*

## How Information Visibility Services Works

When user-defined performance metrics are triggered, the notification module distributes alerts, and the dashboard displays information used to maximize decision-making, drive quality improvements, and improve performance. Achieving this level of situational awareness and having the opportunity to act on it is essential for accomplishing organizational objectives.

## Why Information Visibility Services is the Right Business Intelligence Solution for You

### Affordability

With Information Visibility Services, you will gain a business intelligence system without the costly process of extracting data, standardizing data, or creating another set of data cubes.

### Clear and Concise Data

You gain a decision support system that provides on demand, clear, visual access to your data, through an easy-to-read dashboard interface. The dashboard displays data in charts and graphs, with the ability to “drill down” to select information.

### Information as an Asset

Your data and your employees are your most valuable assets. Information Visibility Services enables an organization to take a cross-functional enterprise view of information as an asset. Data is not extracted, standardized, or centrally stored; instead, the data continues to be stored in the parent system, and Information Visibility Services accesses the data directly.

### Continuity

All authorized users are able to browse, search, and navigate data, thus connecting employees across the enterprise, promoting communication with a consistent vocabulary, and enhancing the organization’s information assets. Executives, managers, and employees are concerned with a specific set of performance metrics for which Information Visibility Services assures a consistent and reliable visual view.
